

Need for Integrated Security

Integral Solutions Group (ISG), a division of J M Smith Corporation, first came to Integrated Biometrics in 2004 as an integrator in need of a dependable biometrics manufacturer. One of ISG's Northern VA-based clients had requested biometric access control for a data center facility, and ISG desired to be their single source technology and integration provider. After an introductory phone call, Integrated Biometrics was able to quickly familiarize ISG with the TRU650, a fingerprint based enterprise access control solution, from its capabilities to its interface and straightforward installation process. Within a short period of time, ISG was able to deliver a robust solution to the satisfied end user.

Real-world Biometric Access Control

In late 2007, ISG moved to its newly constructed office in Spartanburg, SC. Having had several years of positive experiences with Integrated Biometrics for its own client base, ISG purchased six TRU650s to control access to different areas of their building that includes the front entrance, computer room and supply warehouse. Presently, 105 users, including employees and maintenance crews, are enrolled in the system that averages over 1,000 uses per day.

Continuing to expand its business, ISG opened South Carolina's first commercially available Tier IV Data and Business Continuity Center on January 1, 2010. Seven TRU650s had been installed during construction of the 20,000 square foot facility and were operating on opening day. Joe Strayer, ISG's VP of Integration Services, comments, "Cards are a big security risk, and we did not even consider their usage at our data center. We've been committed to using Integrated Biometrics' TRU650; its security and reliability are paramount to our success." As evidence of ISG's success, a plan for constructing a second data center is already in the works.

Customer: Integral Solutions Group

Industry: Data Centers & Integrators

Product: TRU650

About Integrated Biometrics, LLC:

Integrated Biometrics develops and manufactures fingerprint-based biometric systems that result in highly dependable logical and physical access control solutions. With its patented LES technology, Integrated Biometrics' customizable software and hardware promote security and usability to fit any organization's identification management needs. Headquartered in Greenville, SC, more information can be found at www.integratedbiometrics.com.

About Integral Solutions Group:

Integral Solutions Group is a high-quality single source IT company providing Managed Services, Data Center Facilities, Network Design and Integration and Technology Supplies for fully integrated and complete IT solutions from concept to 24x365 continual customer support. For more information about Integral Solutions Group's services, please visit www.integralsg.com.
